100% European Green Oak

Unlike the majority of timer kits on the market, our products are made from 100% European Green Oak, including rafters and studwork.

Brick-Width Uprights

The uprights of our kits are 215mm, standard brick size, the beam integrates seamlessly with the brick plinth so doors can be mounted directly.

Traditional Design

Not to be confused with the lower end of the market, our designs have the detail and strength of a hand-crafted bespoke oak frame building as a pre-cut kit. Larger beam sizes to deliver the aesthetic, but with the cost and ease of a pre-cut kit.

State of the Art Manufacturing

Our innovative machinery is capable of transferring, qualitatively and cost effectively detailed designs into accurate components that can quickly and easily be erected by a professional carpenter/builder.
